Description

Preconditions:

- An admin is allowed to add/edit/delete new products
- Before adding products, Admin must make sure that has all the necessary information about the product he is adding to the store.

The "Insert" button directs the administrator to a page requiring product information under the following tabs: Overview, General, Data, Links, Attribute, Option, Discount, Special, Image, Reward Points, Design. The following fields must be implemented with the following requirements:

Product Overview:

Every row of product will contain the following information:

- **Image**
- **Product Name**
- **Model**
- **Price**
- **Quantity**
- **Status**: Selecting "Enabled" lets the product be visible in the store's store front. Selecting "Disabled" will remove the product from view. Checking an individual box in the first column will select the product information within the same row. Once selected, you can choose to "Copy" or "Delete" the product. "Copy" will duplicate the product and it's information categories. "Delete" will remove the product selection (including its information) completely. If you would like to look up a product in the product list, you can use "Filter" as a shortcut to search for it. For more information on the Filter tool, visit Filter. Pressing "Insert" in the top right corner will direct the administrator to a form to add new products.

Managing and adding products in the catalog

The complete list of store products can be found under Catalog > Products. If this is your first time in the Product section, you will notice the default products left over from the installation. These products can be used to experiment with and explore the OpenCart features before launching your store. You will eventually need to delete these products to make room for your store's products.

To delete the default products:

1. Check the box left of the "Image column" in the list. This should select all the products on the page.
2. Click the "Delete" button on the top right side.
3. Press "OK" when a window pops up asking "Delete/Install cannot be undone! Are you sure you want to do this?".

There should now be a blank list to add individual products to. The "Insert" button directs the administrator to a page requiring product information under the following tabs:

- General
- Data
- Links
- Attribute
- Option
- Discount
- Special
- Image
- Reward Points
- Design

Before products are added to the administration, product categories must already be established by the administrator. See Categories before continuing with this section. With the product categories created, products are now ready to be added to the catalog.

OpenCart currently only allows products to be added one at a time, not in mass quantity. Extensions can be purchased to add large amounts of product at once. See Product import for more information.

Saving the product

At this point in the guide, you will have completed all the steps and filled out all the appropriate information for the product. To complete the process of adding this product, click "Save". When you return to the Products page under Catalog, you will now see this product listed. You can choose to modify any of this information included above, at any time, by clicking "Edit" across from the product.

Product General - General Tab

The format of the General tab is identical to the General tab when creating a product category, with the addition of the Product Tags feature:

- **Product Name**
- **Meta Tag Description**: A summary to describe the product page to search engines.
- **Meta Tag Keywords**: Similar to meta tag description, but asks for a single keyword to describe the product.
- **Description**: Text that will describe this product on the product page, to be viewed by the customers in the store front of the shop.
- **Product Tags**: A tag to describe the product to the customers. If a customer types in this tag in the search box found in the header, the product will be displayed in the search results.

Products Data - Data Tab

The data tab includes all the product criteria that will be included on the product page in the store front for customers to view:

Fill in the spaces above with the following information:

- **Model**: create a model number for the product using a combination of letters and numbers. (required)
- **SKU (stock keeping unit)**: a random code for the product.
- **UPC (universal product code)**: the product's unique barcode.
- **Location**: where the product is located.
- **Price**: set a price for the product.
- **Tax Class**: select a tax class category on this product that was made Settings > Localisation > Tax Classes. This will apply the tax in the checkout for the product. Select "None" if taxes will not be applied to this product.
- **Quantity**: The total amount available in the store for this specific product.
- **Minimum Quantity**: the minimum amount of product a customer must reach to add that product to their Shopping Cart.
- **Subtract Stock**: "Yes" will subtract stock from the quantity of the product (Ex: If there are 100 computers, and a customer buys 2 computers, Subtract Stock will change the quantity to 98).
- **Out of Stock Status**: select "Out of Stock", "In Stock", "2-3 days", or "Preorder" as the message shown on the product page when the product's quantity reaches 0.
- **Requires Shipping**: If the product requires shipping, select "Yes". If not, select "No".
- **SEO keyword**: create a keyword for search engine optimization of this product. It will be seen in the URL of the product page. Therefore, the keyword created must be unique for every product.
- **Image**: clicking "Browse Folders" will lead the administrator to the Image manager to upload a new image.
- **Date Available**: the date when this product will become available for purchase.
- **Dimensions**: enter the length by width by height of the product if there are dimensions to include.
- **Length Class**: determines the metric units for the dimensions above.
- **Weight**: Enter a number for the weight.

- **Weight Class**: Specify the units of weight for the number entered into "Weight".
- **Status**: Enabling makes the product publicly available in the store. Disabling allows the product to be edited in the administration , but hides it from the store front .
- **Sort Order**: When the product is sorted in a list, a number assigns it a priority. A product with a sorting order or 2 will be placed higher than a product with a sorting order of 3, but lower than a product with a sorting order of 1.

Products Links - Links Tab

The Links tab specifies which pages OpenCart will show the product on:

- **Manufacturer**: Selecting the product's manufacturer will place the product on the manufacturer's page. Select manufacturers can be viewed on the home page if added to the [manufacturer banner](#).
- **Categories**: Check the categories that the product will be placed into. The product will be listed on the category's page in the store.
- **Filters**: Select the filters to be applied to this product if your Filter module is enabled. See [Filters](#) for more information.
- **Stores**: Check which stores will sell this product. Clicking "Default" applies if there is only one store to be managed.
- **Downloads**: If the product is a downloadable product, select the file that will be included with the purchase.
- **Related Products**: In this space, type any related products for this product. These products will be displayed on that product's page for the customer to view. When typing in the space, a drop down box will appear with related products.

Product Attributes - Attribute Tab

Attributes are the specifications that are compared between products in the Product Comparison. [Attributes](#) are originally created under Catalog > Attributes. In Catalog > Products, selecting an attribute will assign an attribute directly to a specific product. If OpenCart was just installed, it will be blank. Press "Add" and a form below should appear. Fill in the blanks with the attribute name and information, and click "Add Attribute".

For example, if a customer wanted to compare monitor size of a computer monitor with another product with a monitor, we could create an attribute for the product. Under "Attribute" we would call it "Monitor size"; in the Text box area we would type the dimensions of the monitor of that specific product, and click "Add Attribute". See [Attributes](#) for a more in depth explanation of attributes.

Product Options - Option Tab

Options are extra selections that a customer can make on the Product page before adding the product to the shopping cart. Options are first created under Catalog > Options, then assigned to a product that is created under Catalog > Products.

One example of an option is "size". Begin by typing "size" into the search box. Size should appear in a drop down box. Select it, and click on the green add button. On the

right, click "Add Option Value".

The Option Values were previously created in the Options section under Catalog. In this section any option can be added, such as "Large". To subtract from the quantity every time a product is purchased with this option, you can select "Yes" under "Subtract Stock". An increase of price can be added to the option value, points, and weight. Click "Add Option Value" to assign that information to that specific option value. You can click "Remove" to erase the option value. See Options for a more in depth explanation of the options feature.

Product Discount - Discount Tab

The Discount Tab needs the following information to include a discount for a product:

- **Customer Group**: A group of customers (made in Sales > Customers > Groups) that meet a criteria to use this discount.
- **Quantity**: The limit for the amount of products that can apply this discount.
- **Priority**: Adding a priority number such as 1, 2, or 3, will determine when this discount will be used when other discounts are applied to a customer's order. 1 will apply this discount first, while 2 will apply it second, and so on.
- **Price**: The discounted price.
- **Date Start**: The first date the discount will be applied.
- **Date End**: The last date available for use of the discount; the date the discount will end.

Press "Add Discount" once the information has been filled in. Click "Remove" to remove the discount from the product.

Product Special - Special Tab

The Special tab is identical to the Discount tab, except that this offer will be considered a special, not a discount. Fill in the customer group, quantity, priority, price, date start, date end.

Product Images - Image Tab

The images tags let the administrator add additional product images to the product page. The main image was already uploaded in the Data tab of Products, so keep in mind these images will be included below that main image on the product page.

You may click "Add Image", then "Browse" to select an image from the Image manager. Assign a number for sorting order. "1" will make it the first additional image, while every descending sorting number will follow it. The image above is an example from a product page in the store front. The large main image was added in the Data tab. The images above were added in the "Image" tab, with the farthest top left assigned as 1, and the following images assigned a lower priority.

Products Reward Points - Reward Points Tab

Reward points is a feature of OpenCart that assigns customers "loyalty points" for

purchasing products from the store. Customers can use these acquired points as a currency to purchase products from the store. You can assign this product a certain number of reward points required for a customer to purchase it with. If you don't want to allow this product to be bought with reward points, you can simply leave this area blank.

Product SEO - SEO Tag

Do not use spaces, instead replace spaces with - and make use the SEO is globally unique.

Product Design - Design Tab

If you want a product available on other layouts besides the product page, you can choose to override certain layouts in order to include that product on that page.

As Admin I want to be able to add/edit/delete new products (OP-2)

Description

Preconditions:

- Admin is allowed to add/edit/delete product categories

Category Overview

In the default theme of the store front, parent categories are listed in the top menu of the home page, and on the left side of product pages. This navigational feature is used to guide customers to similar products within the same category. Exposing customers to different products within a category lets the customer compare the similarities and differences between products to make the most informed purchase. When adding products to the store, you will be asked for a product category to sort them in. It is a good idea to establish these categories before adding products, to save yourself the trouble of adding the category name to the products later.

When adding a product without a product category, the product will not show up under any categories in the front end of the store. The product page can only be accessible if the customer types in the product name, one of the product tags in the search box, or visits the product through a manufacturer page. If you want this product to be more visible to your customers in the store front, we suggest that the category is created prior to adding the product. To access the Category page in the administration, hover over the Catalog button and click on Category in the drop-down. You will be a directed to a page that displays the category names of the store products (as seen below).

The categories above were included with the default products provided by the install. You may delete them to make room for the store's product categories. To delete, check the box next to the row that the category is listed on. When the products selected for deletion are checked, "Delete" can be clicked on in the upper right corner. This should remove the product categories completely.

The ">" symbol points from a parent category to a sub-category. "Laptops & Notebooks > Windows" indicates that "Windows" is a sub-category sorted under the parent category "Laptops & Notebooks".

The Sort Order indicates the order that the categories are displayed in the top menu and category box on the product page. Desktop (sort order-1) will be sorted above Laptops & Notebooks (sort order-2) because it has a higher priority.

Leaving "Sort Order" blank will organize the sections in alphabetical order.

Clicking "Edit" under "Action" will direct the administrator to a form to change the category information. Clicking "Insert" will allow the shop owner to insert more products to the site.

Create a category

Before you learn how to add products, you will need to understand how to create product categories. Product category is an essential organizational feature in OpenCart. OpenCart organizes the structure of an online store around these product categories. Every product category gets their own space in the store to display all the available

products for that category.

Organizing products into categories is useful for navigating a store's inventory in both the store front and administration side. In the administration, creating categories for products will help the shop owner keep track of specific products within a category. In the store front, customers will be able to browse their favorite products by category. Category pages can be accessed in the top menu and from the category box in the product page.

Before inserting products into OpenCart, you should take some time to brainstorm and establish categories for your products. Think of how the products in your store can be organized into groups in a logical manner. Generally, you would want to start with creating a broad parent category, and move narrower into specification with each sub-category below it. For example, a broad category such as Electronics is a good parent category. Under the Electronics, a sub-category named "Computers" can be created; and under that category, "Laptops". You can see how each category becomes more specific as we progress. Putting effort into this task will improve a store's usability, ultimately bringing customers to other products in the store that may interest them.

Go to Catalog > Category in the administration. If this is your first time in the category section you will see a list of categories created for the default products. You should feel free to delete them to make room for your store's products. To create a new category for products you can click "Insert" in the upper right corner. You will be directed to the category's information page. Category information can be filled out under three tabs: "General", "Data", "Design".

Category General - General Tab

The General tab asks for basic information regarding the product category:

Category Data - Data Tab

The Data tab asks for the following data:

- **Parent Category**: Categories are arranged in a hierarchical structure; with the parent category always on top. You may choose to create a category under a parent category, turning it into a sub-category. In the category list the category will be displayed as "Parent Category > Sub-Category". If "None" is selected, the category created will be a parent category.
- **Filters**: Map any pre-created filters to a category. See Filter for more information on how filters work.
- **Stores**: If you are managing more than one store with OpenCart, you may check which stores you would like to add this category to. If only one store is available, "Default" may be checked. See Creating a multi-store for more information about multi-stores.
- **SEO keyword**: A keyword that will be included in the category url for search engine optimization.
- **Image**: Select the main image for the product page and the thumbnail for

product listings. See Image manager for more information on how to upload an image using the image manager tool.

- **Top**: Checking this section will display this category in the top menu of every page. If no selection is made, it will not be displayed. The top menu only displays parent categories. If this category is a sub-category, it will not be displayed in the top menu.
- **Columns**: This number controls how many sub-categories are displayed when selecting the parent category. Shop owners with many product sub-categories may need to pay special attention to how many columns are allowed. If all the available sub-categories are allowed for a product category, the entire store page in the store front will be filled with sub-categories when hovered over.
- **Sort Order**: This sort order determines the position of the category in the menu. A sorting order of 1 would be displayed before a sorting order of 2, 3, and so on.
- **Status**: Selecting "enabled" makes the category publicly available in the store front. Selecting "disabled" will hide the category from the store front, but will still be available for editing purposes in the administration.

Categories SEO - SEO Tag

- Do not use spaces, instead replace spaces with - and make sure the SEO URL is globally unique.

Category Design - Design Tab

The design tab consists of the "Layout Override" feature. In this feature, you can choose to override a layout, such as the 'Account' page, to include the category on that page. For more information on layouts, see Modules. You can just leave it blank for the meantime.

Pressing 'Save' in the upper right corner will save the information in the General, Data, and Design tabs, and add the product category to the category list. With the product categories created, you are now ready to add products to the shop.

Epic Link:	Admin Product Category Module

Description

Preconditions:

- Admin successfully logged in with valid username and valid password
- The categories were included with the default products provided by the install. Admin may delete them to make room for the store's product categories.

Steps:

- Access Category page in the administration
- Select a product category to delete by clicking in the box next to the row that the category is listed on
- When the product category selected for deletion is checked, click "Delete" in the upper right corner
- A message box with two options to choose from is displayed: Cancel and Yes
- Choose "Yes" button

Expected result:

The "Delete"/"Yes" button should remove the product categories completely.

[OP-13] Verify if Admin can create a new category of products (filling in all the mandatory information) Created: 29/May/23 Updated: 17/Oct/23

Epic Link:	Shopping Cart Module

Description

Store Front documentation: http://docs.opencart.com/en-gb/store-front/

Shopping Cart: Displays the number of items purchased, and the total price of the order. Clicking on the button will containing all of products added to the cart and an option to "View Cart" or "Checkout".

Shopping Cart page

Once a customer adds a product to the cart, they can access the shopping cart in the header under "Shopping Cart".

The shopping cart gives an overview of the product selected by including the categories "Image", "Product Name", "Model", "Quantity", "Unit Price", and "Total". The customer has an option to add a coupon code or gift voucher, or estimate shipping & taxes, before heading to the checkout. The "Continue Shopping" button links back to the homepage.

Description

Checkout

Once a product has been added to the cart, the customer can continue to the checkout to make their product purchase. The Checkout page can be accessed in the header section of every page (found under the search box). Customer checkout using OpenCart is a simple process that can be completed in 6 steps.

1. **Step 1: Checkout options**
   The customer can log into or register their account (as explained above), or select guest checkout.
2. **Step 2: Billing details**
   Personal details including "First Name", "Last Name", "E-mail", and "Telephone" are filled into a form. It also requires the customer's address details.
3. **Step 3: Delivery details**
   In Billing Details, the user can check a box to indicate that the delivery details and billing details are the same. This will cause it to skip over this step to Delivery Method. If the delivery etails are different from the billing details the customer can enter this information in a form in this section.
4. **Step 4: Delivery method**
   A method of shipping is selected here. A comment box is added for the customer to add comments about their order.
5. **Step 5: Payment method**
   The customer selects their method of payment here and may add comments in the comment box.
6. **Step 6: Confirm order**
   In this last step, the customer will see an overview of their purchase; including the product description, quantity, and price (with tax & shipping).
